Common Rating Challenges

How Duck Creek Rating Moves You Forward

<p>Slow rating cycles delay launches Opportunities slip away while teams wait on pricing changes, killing market momentum.</p>	<p>Launch and adjust faster Low-code tools and reusable rating logic cuts launch time and cuts pricing adjustments by 50%.</p>
<p>Manual changes inflate costs Time-intensive pricing updates increase operational expenses and limit the ability to respond to market shifts quickly.</p>	<p>Lower cost and higher velocity Low-code lifecycle support and product inheritance reduce manual effort and IT dependency.</p>
<p>Limited visibility increases risk Without clear insight into the impact of change, pricing decisions carry unnecessary compliance and business risk.</p>	<p>Confident, controlled decisions Integrated what-if analysis shows business and compliance impact upfront—before pricing changes are deployed.</p>

Turn pricing precision into profitable growth.

The engine that powers faster, smarter, and more governable pricing

FEATURES

What-If Modeling

Model rate and underwriting scenarios before deployment to assess impact and refine pricing decisions.

Low Code Product Definition

Configure rates, rules, forms, and workflows through low-code tools for faster, more consistent rating logic.

Product Inheritance

Reuse rating structures across lines, regions, and products to maintain consistency and speed configuration.

Centralized Lifecycle Management

Control rating updates end-to-end with built-in audit controls that enforce governance and accuracy.

Seamless Integration

Integrate Rating with Policy and the ecosystem to keep pricing, workflows, and downstream processes aligned.

Why Carriers Win with Duck Creek

Enterprise-grade rating engine

Built to handle the complexity of personal, commercial, and specialty lines with one centralized engine that keeps pricing logic consistent across the enterprise.

Low-code rating design

Configure rates, rules, algorithms, and workflows through low-code tools, reducing IT dependence and speeding up pricing iteration.

Integrated bureau updates

Native support for ISO, AAIS, and NCCI content keeps rating current, reduces manual maintenance, and strengthens compliance.

What-if modeling & experimentation

Simulate scenarios, compare outcomes, and refine pricing strategies before deployment to ensure confident, data-backed decisions.

Product inheritance at scale

Reuse rating structures across lines, regions, and products so updates flow consistently, reduce duplication, and accelerate delivery.

Proven in the Market

A major California-based auto insurer modernized and integrated Duck Creek Rating for 100% automation and a 40% revenue increase.

"The rating engine was something that stood out for Duck Creek over the competitors... the proof of concept really sold us."
