

Embracing the Future of Core Systems with Duck Creek Active Delivery

As the insurance industry evolves, traditional software upgrade cycles struggle to keep pace with rapid technological advancements. Duck Creek Technologies' Active Delivery introduces a transformative approach - a cloud-native solution that offers bi-weekly product updates via the Azure cloud. This method allows insurers to stay continuously updated with the latest features and improvements, eliminating the need for disruptive, large-scale upgrades. We understand moving to Active Delivery requires careful planning and execution, and we are ready to partner with you on your journey.

We understand that moving to Active Delivery is a significant shift that requires careful planning and execution.

We're here to help.

How NLS Supports Your Transition to Duck Creek Active Delivery

At Next Level Solutions, we understand that moving to Active Delivery is a significant shift that requires careful planning and execution. Here's how we can help you make this transition smooth and successful:

Seamless Integration

We serve as your gatekeeper, ensuring the bi-weekly updates from Active Delivery integrate seamlessly with your existing systems. By managing the introduction of new features with feature flags, we'll help you avoid any potential conflicts and maintain uninterrupted operations.

Proactive Testing

We provide thorough testing services with each update, quickly identifying and resolving any issues to ensure your system remains stable, efficient, and high-performing.

Technical Debt Management

Our team will work with you to assess and address any outdated or customized code, ensuring your systems are fully compatible with the new delivery model. This proactive approach reduces the risk of disruptions and keeps your technology stack up-to-date.

Focusing on Business Innovation

By handling the complexities of Active Delivery, we allow your internal team to focus on driving innovation and achieving your strategic business goals, rather than getting bogged down in routine maintenance.

The Quality Assurance Approach

Our QA team ensures a smooth transition to Duck Creek Active Delivery by optimizing coverage, streamlining data, and validating updates. Our approach minimizes risks and maximizes efficiency, making your system ready for seamless deployment.

- **Efficiency Optimization:** We streamline processes to reduce manual effort and speed up regression testing, ensuring swift and accurate updates.
- **Strategic Regression Testing:** Our QA team targets critical system areas to ensure updates integrate seamlessly without disrupting functionality.
- **Streamlined Data Validation:** We use automation and advanced techniques to ensure consistent, accurate data inputs and outputs, reducing errors and maintaining system integrity.
- **Strategic API Validation:** We use API tools to thoroughly test and verify system interactions, ensuring integrations work as expected with every update.
- **Coverage Optimization:** Our QA process maximizes test coverage, ensuring all critical scenarios are addressed and your system is ready for Duck Creek Active Delivery.
